

YOU DON'T NEED AN ENVIRONMENTAL SCIENCE DEGREE TO CHOOSE THE RIGHT BIN.

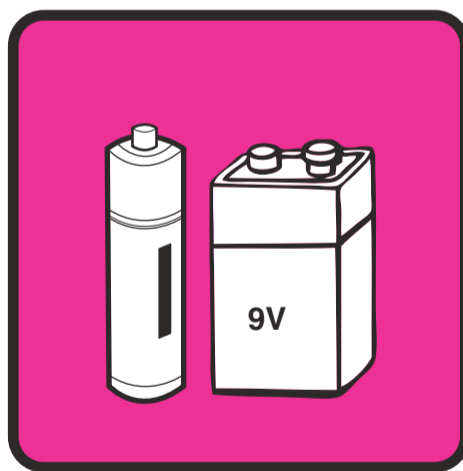

FOOD & DRINK CONTAINERS

Manufacturing plastics from recycled materials saves 70% of the energy required to make plastic from fossil fuels. Glass can be recycled an infinite number of times without any loss of quality.

PAPER & CARDBOARD

Paper can be recycled into office paper, toilet paper, newsprint and cardboard depending on its grade. One tonne of paper or cardboard recycled saves up to 13 trees.

E - WASTE

Electronic waste contains many toxic materials such as lead, mercury, cadmium, and valuable materials like gold and copper. Over 90% of the materials in mobile phones can be recovered and used as raw materials for new products. Look for the mobile phone and battery recycling tubes.

DON'T CONTAMINATE

NO take-away coffee cups, no food, no plastic bags in any of the recycling bins. Contaminants will stop your recycling being processed properly.
