

You don't need a natural science degree to care for the environment

Stay on the paths when you're out walking to prevent erosion.

Look out for new introduced species in your area.

Establish native plants in your area to increase habitat available for endangered species.

Check for weed species on your vehicles and shoes.

Develop a connection to nature by spending time outdoors.

Remember that everything you put down a drain ends up in rivers and oceans.

Reduce the amount of natural resources that you consume.

Reduce your fossil fuel use and compost organic waste to reduce greenhouse gas emissions.
